Open to remote roles | Comfortable with US/EU time zones

Summary

High-agency builder who ships products end to end across engineering, product, customer support, and growth. Co-founded a 1M+ user app that hit #1 on the App Store, and built a Presidential Award-winning AI platform, owning everything from architecture to App Store positioning to support. Moves fast from zero to production across web, native, and LLM/agent systems, and learns whatever the problem needs. Strong in TypeScript, Python, React Native, and agent/RAG infrastructure.

Core Competencies

Full-Stack Engineering | AI/LLM Infrastructure | Agent Orchestration | Product & Growth | Customer Support | API Design | Database Architecture | Real-Time & Offline-First Systems | Microservices | DevOps | React Native | Next.js | TypeScript | Python | PostgreSQL | AWS | Docker

Experience

Seam (NSO Engineering) Founding Engineer

Remote (US) | Jan 2026 – May 2026

- Built and configured **production LLM agents** in the NestJS API like: a knowledge-graph extractor (Claude 4.5 Sonnet, structured 5-edge-type taxonomy), an educational article writer (Gemini 2.0 Flash, relationship-aware narrative generation), a tool-using tutor chatbot (GPT-4.1 with 10-tool surface and anti-hallucination “search-first” guardrail), and a runtime prompt-enrichment layer that injects per-seeker behavioral context into system prompts.
- Built the **personalized feed from scratch** (Prisma ORM + PostgreSQL): behavioral scoring model, daily cron aggregation, and topic-relevance ranking that surfaced content with zero manual curation.
- Migrated mobile from Flutter to React Native** (Expo SDK 55) mid-project to unify the stack on TypeScript; rebuilt universal deep linking, push notifications, and Google Sign-In across iOS and Android.
- Shipped **unified auth across web and native** (Better Auth, Google OAuth, Stripe subscriptions), handling token refresh, session recovery, and payment-state transitions.
- Extracted **SigNoz + OpenTelemetry** into a shared workspace package so every microservice shipped with structured logs and traceable failures by default.

Folderly Co-Founder & Product Engineer folderly.top

Cebu, PH | Dec 2023 – Present

- Co-founded and scaled a cross-platform productivity app to **1,000,000+ users (#1 on the App Store Top Free and Top Productivity charts, 4.9-star average across 20K+ reviews)**, owning architecture, product, App Store positioning, and support.
- Ran **all customer support solo** for the 1M-user base: triaged bug reports, App Store reviews, and a 5,000+ member Discord, feeding recurring issues straight back into the product roadmap.
- Architected and built the PowerSync layer on Supabase Postgres (schema, connector, provider, and per-entity operation hooks), delivering **offline-first, real-time sync** across iOS, Android, and native home-screen widgets.
- Diagnosed an unshippable Triplit sync layer (unauthenticated writes crashing the server, deleted-user “zombie” data, a corrupting change queue); **authored the postmortem**, shipped stability fixes, and drove the migration off it.
- Rewrote the app across **three stacks** as it scaled (Flutter to native Swift/Kotlin to React Native), consolidating on a unified TypeScript + Expo codebase across iOS and Android.
- Executed a **zero-downtime migration** of user images from base64-in-Postgres to Supabase Storage with a production-hardened backfill script and a legacy-fallback hook that kept existing installs working through rollout.

Azeus Systems Software Developer Intern

Remote | Jun 2024 – Jul 2024

- Built a **production RAG system end-to-end** (LangChain, Supabase, Chroma): selected the stack and designed a 5-stage retrieval pipeline with agents.
- Built orchestration and state management in **LangGraph** so the system answered domain-specific queries autonomously, with retrieval quality tuned across each stage.

NCR Atleos AI Project Intern Lead

Cebu, PH | Jun 2023 – Sep 2023

- Led a team to ship an **AI fraud-detection system end-to-end**, from problem definition through production deployment and real-time alerting.
- Cut flagged fraud incidents 30%** and presented results to NCR executives, the VP, and Dundee staff; recognized for innovation and impact.

- Led development of a retail-deployed Progressive Web App used across **20+ physical stores** for a major baking brand, building it from scratch and owning all technical decisions.
- Designed an **offline-first architecture** for reliable performance on poor connectivity, keeping time-to-interactive fast for non-technical store staff.

Projects

Creatorly AI Influencer-Marketing Platform creatorly.co

2025–present

- Built an **AI influencer-marketing platform end-to-end** (web app, landing, reusable SDK) that emails creators, negotiates rates within budget, and books calls automatically.
- Tracks **closed-loop revenue per creator** via promo codes and attribution pixels, with RevenueCat and Mixpanel integrations for conversion and retention data.
- Productized the exact system that cut Folderly's influencer **CPA 73% (\$127 to \$34)** across 500+ negotiations into a paid B2B SaaS for D2C brands (\$99–\$799/mo).

Project GUIA AI Infrastructure Planning Platform [award details](#)

2025

- Built an AI platform that ingests real-time climate, hazard, and zoning data to guide **government infrastructure and land-use decisions**, surfacing siting risk through an interactive map interface.
- Presented the digital urban-planning proposal to the Cebu City government; won the **Presidential Innovation Award (PHP 900K / ~USD \$15K)** from the President of the Philippines.

Agent Zer0 AI Outsourcing Agent for SMEs agent-zero.vercel.app

2025

- Built a multimodal LLM agent that **autonomously runs SME support workflows**: CRM integrations, knowledge-base queries, and external-API actions.
- Engineered **graceful failure recovery** and fallback handling so the agent degrades safely instead of breaking mid-task. Live at agent-zero.vercel.app.

Edge AI Bird-Counting Device Undergraduate Thesis

2025

- Built an edge-AI device with an on-device computer-vision model that counts birds continuously, running **24/7 with zero downtime**.
- Achieved higher counting accuracy than human counters at roughly **80% lower cost**; completed as an undergraduate thesis.

Bytecode VM in C

2023

- Built a bytecode interpreter **from scratch in C**: compiler front-end, virtual machine, and a custom garbage collector, with support for recursion.
- **Outperformed Python 2.7** on standard benchmarks.

Awards & Recognition

- **Gawad Pangulo sa Natatanging Inovasyon**, National awardee from the President of the Philippines (PHP 900K prize), 2025
- **UP Cebu Most Outstanding Innovator**, first-ever recipient for applied innovation and civic tech, 2025
- **5x Hackathon Champion**, HackEstate, AppCon, UPCSG, Interschool (incl. APRU x Google Tech Policy Hackathon), 2023–2025

Education

University of the Philippines Cebu, BS Computer Science

Graduated July 2025

Technical Skills

Languages: TypeScript, Python, JavaScript, C, C++, SQL, Swift, Dart, Kotlin**Frontend:** React Native, Expo, Next.js, React**Backend:** Node.js, NestJS, Express, FastAPI**Data:** PostgreSQL, Supabase, MongoDB, Chroma, PowerSync, Prisma**Cloud/DevOps:** AWS, Docker, CI/CD, Vercel, Railway, EAS**AI:** LLM Pipelines, LangChain, LangGraph, RAG, Agent Orchestration, Vector Search**Tools:** Git, GitHub, Figma, OpenTelemetry, SigNoz, Better Auth, Stripe, RevenueCat**Architecture:** API Design, Microservices, Real-Time, Offline-First, Event-Driven, State Management
